

Laboratory Technician

Steeper's Advanced Biofuels Centre

Calgary, Alberta

Eager to make a difference in a changing world?

Steeper Energy is a world leader in the development of technology for production of advanced biofuels from low-value biomass, such as residues and wastes from the agriculture and forest industries as well as urban waste, wherein the latter case circular solutions are sought for by society, in order to create sustainability. Steeper Energy's Hydrofaction® produces drop-in renewable fuels with high energy density enabling the heavy transport sector to seamlessly transition to low carbon fuels. With an experienced team of world-class talents and strong industrial partnerships, Steeper is a leader in the realization of a low-carbon transport future and circular solutions for society.

ENABLING REDUCTION OF CARBON FOOTPRINT

Steeper Energy offers a solution to a stated goal by society to reduce carbon emissions. Climate changes caused by utilization of fossil fuels are known to cause global damage. Within transportation carbon emissions keep rising while leaders across the globe have made bold commitments to bring emissions down.

Electrification of light vehicles provides part of the solution. However, heavy trucking, marine and aviation cannot be readily electrified, and despite improvements in fuel efficiencies and emissions from long distance heavy transport are predicted to go up.

The international community is struggling to find solutions and agrees that action cannot be delayed. Steeper Energy's proprietary Hydrofaction® process provides a solution that cost-effectively converts biomass to renewable transport fuels that can be used in existing infrastructure.

Hydrofaction® is Steeper Energy's proprietary implementation of hydrothermal liquefaction, which applies supercritical water as a reaction medium for the conversion of biomass directly into a high-energy-density renewable crude oil, referred to as Hydrofaction® Oil. Steeper's unique process mimics and accelerates nature's processes by subjecting wet biomass to heat and high pressure. Hydrofaction® process conditions are carefully chosen to promote reaction pathways that favour high yields of high-quality renewable oil. These process conditions, with the operating temperature and pressure well above the critical point of water, and the use of homogeneous catalysts promote chemical reactions, leading to the formation of low-oxygen renewable crude oil. Additionally, recycling of oil and process water effluent is a unique feature of Hydrofaction®, which brings synergistic benefits in various parts of the process. Using all the above sophisticated and unique features, Hydrofaction® achieves biomass-to-oil conversions of 45% on a mass basis and 85% on an energy basis. And of course, these developments of Steeper Energy are globally patented.

Are you a self-driven and competent person with a desire to drive development of technologies and vision to the market!

Steeper's Advance Biofuel Centre is a unique laboratory focused on developing commercially viable processes for the upgrading and co-processing Hydrofaction® Oil to high-value ultra-low carbon fuels. We are currently advancing in bio-crude oil characterization, upgrading to drop-in fuels and value-added chemicals, as well as the co-processing of Hydrofaction® Oil with relevant petroleum refinery feedstocks.

We are looking for highly motivated, enthusiastic, results-oriented individuals who are energized by working with people and achieving superior results. You will be specifically tasked with developing and implementing the biocrude upgrading and co-processing strategies at the pilot-scale plant. Our ideal candidate will be trusted to dive right in, take the lead to improve and optimize our upgrading and characterization technologies and look for opportunities to contribute to value creation.

ESSENTIAL DUTIES & RESPONSIBILITIES:

- R&D activities in relation to development and optimization of Steeper Energy's commercial engineering design for upgrading Hydrofaction® oil produced from various input materials to finished fuels or chemicals both for stand-alone operation and as co-processing at refineries, including execution, troubleshooting, data analysis, documentation and reporting of agreed experimental studies in the form of technical reports;
- Operate, maintain and repair laboratory equipment following equipment requirements and calibration checks;
- Perform laboratory testing following training in test procedures;
- Performs basic analytical testing with progressive learning of new test procedures and data interpretation;
- Assist in developing and conducting sampling and analysis;
- Provide general lab support and other duties as assigned by Management.

QUALIFICATIONS/EXPERTISE:

- Technical diploma as a laboratory technician, chemical Technician, Petroleum Technician or mechanical technician;
- Working experience in analytical laboratory > 1 years
- Knowledge and/or experience in refinery operation
- Strong analytical and characterization skills
- Highly motivated, enthusiastic, results-oriented and flexible individual
- Ability to develop creative solutions
- Strong written and verbal communication skills in English are required
- Be a strong team player

WHAT WE OFFER YOU:

You'll be a member of a culturally diverse and passionate group of people enthusiastic about commercializing our core technology, Hydrofaction®, as well as providing upgrading pathways to produce 100% renewable fuels and chemicals. A key next step in our development is optimizing biocrude drop-in points within typical petroleum refinery operations. You will have tremendous learning opportunities and will be encouraged to contribute and show us your creativity actively.

You will enter an area with high standards and a high scientific level of research and development and work with groundbreaking processes.

This position is a full-time position. It is fundamental that the new employees can thrive in an entrepreneurial environment. We work hard and play hard, so you can expect the odd very long day when we are meeting deadlines! You will also be working with your colleagues in Europe and other global locations, so you may occasionally be asked to travel.

Interested applicants are asked to forward their resume and cover letter to careers@steeperenergy.com

We thank all applicants for their interest; however, only those persons for whom we need further information or are being considered for an interview will be contacted.

Eligibility to work in Canada

All applicants who receive an offer of employment must be eligible to work in Canada on their start date. Proof of eligibility shall be in the form of a Canadian birth certificate, Canadian passport, Canadian citizenship certificate, Canadian certificate of permanent residence, Canadian open work permit or receipt from Immigration Canada of an application for a post-graduate work permit. Proof of eligibility must be current and valid (not expired, cancelled or voided). Proof of eligibility will be required if an offer of employment is made. Failure to provide proof of eligibility at least six (6) weeks prior to the start date may result in the offer of employment being rescinded.

Application deadline: Posting will remain open until a suitable candidate is found.

Steeper Energy is committed to providing equitable treatment and equal opportunity to all individuals.

In certain situations, Steeper may use your application to consider your suitability for other positions in the company.
